Paruh melengkung

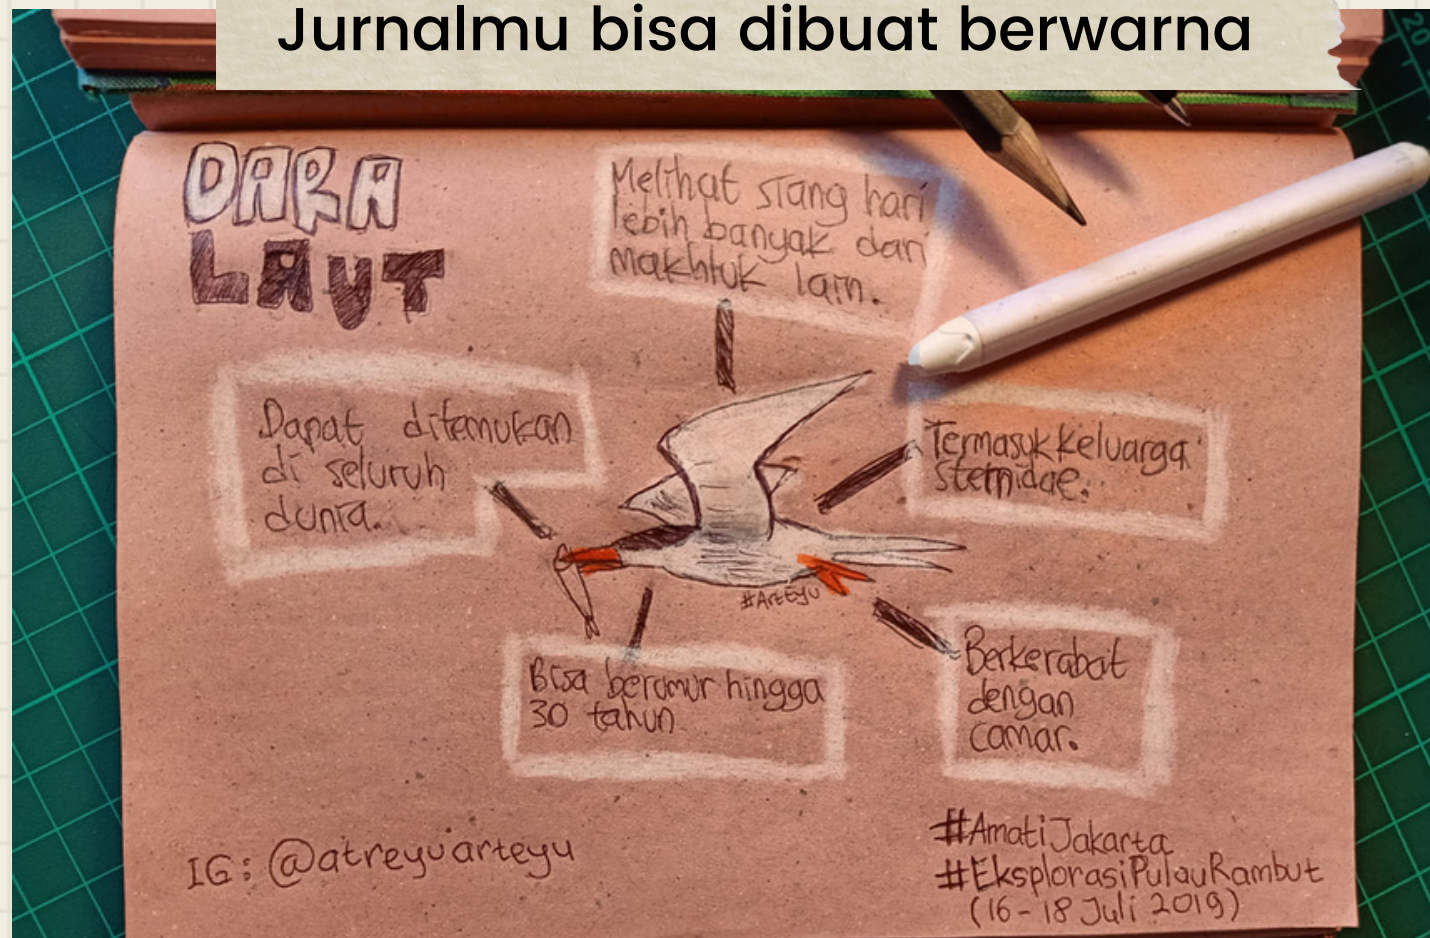

Yuk kita catat hasil pengamatan kita!

Siapkan Buku Jurnalmu :D

Jurnalmu bisa dibuat berwarna

Denah tempat pengamatan

Rambut Island · April 16-17, 2017

Location: A small island ~~near~~ in Jakarta bay (45 HA)

- A strict Nature Reserve, need a special permit to enter to one live there
- Annual agenda of Jakarta bird walk (JBW) Comunit
- 40 Participants (Mostly college student & several families with children)

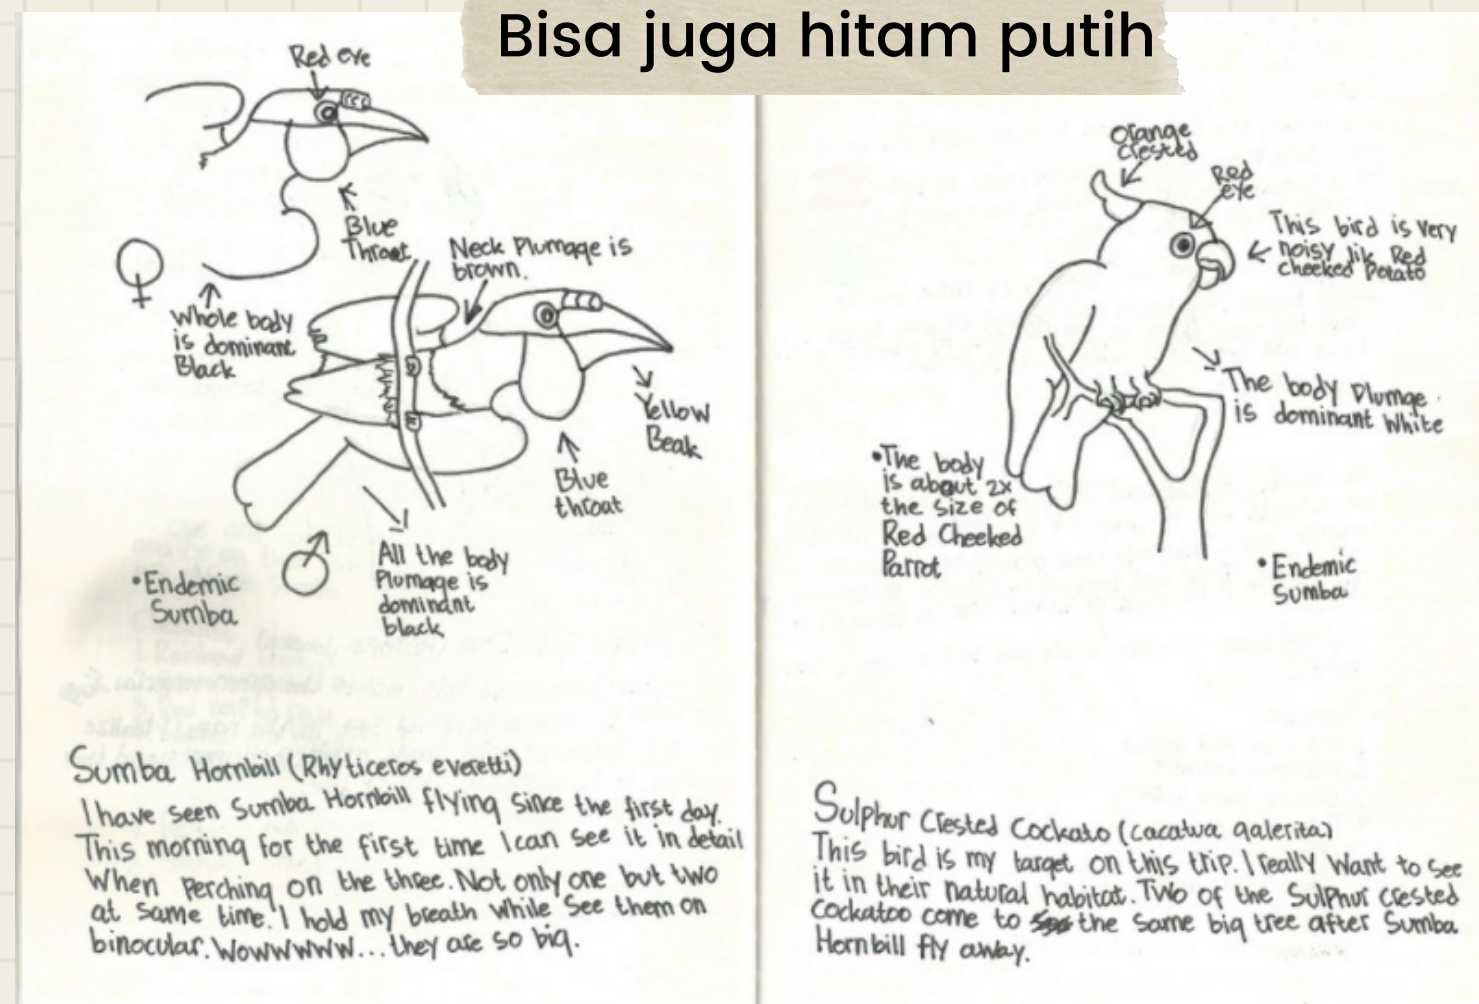

Habitat: Tidal flat, Mangrove forest, Some old trees in the center of the island

I have visited Rambut Island every April since 2015. We usually arrive at the island around noon for late noon observation. We stay overnight in Untung Jawa island (about 5 minutes by boat), then back to Rambut island the next day for morning observation.

I have kept personal record for the new species I saw during two days observation in Rambut Island since 2015

Bisa juga hitam putih

Selamat Mengamati!
